

The University of Göttingen enjoys high international acclaim, owing to its long research tradition and broad spectrum of subjects in the natural sciences, life sciences, humanities and social sciences. With more than 210 degree courses, we offer an attractive range of subjects for around 30,000 students. Göttingen is characterized by the close cooperation of the University, the University Medical Center and seven non-university research institutions that form the Göttingen Campus. Its innovative, interdisciplinary potential creates excellent conditions for cutting-edge research at the highest international level.

The Faculty of Agricultural Sciences at the University of Göttingen and the Associated Institute of Applied Plant Nutrition are seeking to fill a temporary professorship for a period of five years with civil servant status (grade W2 NBesO) at the earliest possible date:

## W2 Professorship in Applied Crop Nutritional Physiology (f/m/d)

This will be a joint appointment by the University of Göttingen and the K+S An-Institutsverwaltungsgesellschaft mbH.

We are looking for a scientifically recognized personality with a profile that covers the field of plant nutrition in research and teaching with a focus on stress tolerance and resource use efficiency, especially concerning essential and beneficial plant nutrients and the resource water. In research, the candidate should have a focus on physiological mineral functions in the plant and mineral interactions concerning productivity and stress tolerance. Experience in the field of micronutrients or foliar nutrient uptake is desirable. In research, the position should substantially strengthen the faculty focus areas „Sustainable productivity, food security, and food quality“ and „Biodiversity and resource management“ and make clear reference to issues of agricultural sciences. A focus on crops under productive cultivation conditions in the field is required. We are seeking an outstanding, team-oriented researcher using current research and analytical methods with a strong international publication record as well as experience in teaching and with the acquisition and implementation of research projects – all relative to the candidate's career stage.

An interdisciplinary orientation and cooperation both within the Faculty of Agricultural Sciences to actively contribute to the profile-forming research foci as well as with other faculties and members of the Göttingen Campus are expected.

The position involves teaching tasks in the form of subject-specific contributions to the Faculty's Bachelor's and Master's programs and the doctoral program. The Master's programs „Agricultural Sciences“ (Crop Sciences), „Sustainable International Agriculture and Biodiversity“, „Crop Protection“ and „Soils and Global Change“ should find special attention. Due to the profile of the professorship with its focus on national and international research fields, the successful candidate should be able to teach in both German and English (after a training period if necessary). The University of Göttingen emphasizes research-oriented teaching.
